

Benefits from Localization Service Provider (LSP) and Translation Company Perspective

- **Reduce dependence on translation memory providers:** You can flexibly use several translation memories at the same time. This means that you can read translations from one translation memory and save them to other translation memory/memories.
- **Finish translation projects quicker and more cost efficiently:** Multilizer can import and export translations from/to several file formats and translation memories.
- **Utilize your translation memories in translating all file formats:** With Multilizer you can utilize, for example, your TRADOS translation memories in translating file formats that TRADOS itself does not support.
- **One tool:** Using a single tool for translating several file formats reduces the skill set that your translators need to master. Multilizer supports over 30 file formats which means that in most cases your translators need to work with only one tool.
- **Savings in license cost:** You can use Multilizer to translate files that would otherwise require purchasing a proprietary license.
- **Structured localization process:** Your translators learn your processes and way of working easier when your tools provide them a backbone.
- **Utilize existing free translation repositories:** For example, Multilizer can reuse the 12.000 translations in 59 languages offered by Microsoft for free.
- **Easy translation outsourcing** with Multilizer's free tool
