

## Multilizer PDF Translator Product Overview

Multilizer PDF Translator Wizard is an easy tool for translating PDF files. It helps translate PDF documents automatically to different languages. It is a complete solution and does not require any other software packages to work. Multilizer PDF Translator Wizard makes PDF translation easy; simply follow these simple steps to translate almost any PDF document:

### There are several benefits using Multilizer PDF Translator:

1. It's simple and easy to use.
2. The original lay-out of the PDF is preserved in the final document.
3. There are no changes made to the original file.

### How it works

Multilizer PDF Translator Wizard extracts texts from PDF files for translation. It retains the layout of the PDF file and only translates the text. The less rigid the layout of the original PDF file - the fewer images and other non-textual elements - the better the result. Translated file can be saved as PDF. With the Multilizer PDF Translator comes a complimentary editor which allows editing and saving translations for later use. *Multilizer PDF Translator does not support editing images that may be embedded in PDF files. If text is stored as image (scanned files) it cannot be translated using Multilizer PDF Translator Wizard.*

The integrated machine translation uses both Google Machine Translation and Microsoft Machine Translator. Naturally, machine translation is available only for languages that those translation services support.

Using automatic machine translation improves the efficiency of the translator and helps understanding foreign language. The quality of machine translations is not perfect and the correctness of the translations cannot be guaranteed. **Note that the PDF format poses certain limitations for the creation of translated versions. Also if translation is longer than the original, it might not fit into the original space. In addition, using non-standard fonts may cause issues.**
