

Multilizer's CodeGear ITE/ETM importer

Updated March 22, 2008. This document is valid until further notice.

Multilizer's CodeGear importer makes the translations in the CodeGear's Integrated Translation Environment (ITE) and External Translation Manager (ETM) available in Multilizer. Using this importer requires that user has access to the files generated by the CodeGear ITE/ETM.

CodeGear ITE/ETM is a translation tool that is integrated in certain versions of Delphi and C++Builder -software development tools. However, ITE/ETM does not support automatic quality assurance or separating development and localization stages. Therefore Multilizer provides migration path from ITE/ETM to Multilizer.

The CodeGear ITE/ETM importer belongs to class A ("plug-and-play") in the Multilizer plug-in classification. This means that this importer plug-in is very easy to use. Please refer to http://support.multilizer.com/docs/multilizer_plug-in_classification.pdf for more information about Multilizer's plug-in classification system.

Multilizer's Codegear ITE/ETM importer works with all file formats that Multilizer supports: OpenOffice documents, XML files, HTML files, major software formats including .NET and Delphi, etc. Visit <http://www.multilizer.com/scanners> for an extensive list of supported file formats.

You can buy Multilizer's CodeGear ITE/ETM importer at <http://www.multilizer.com/store>.
